

# EDULOG'S PARENT PORTAL APP

## FREQUENTLY ASKED QUESTIONS FOR PARENTS AND GUARDIANS

### GENERAL

**Q: What is Edulog's Parent Portal? How do I sign up to use it?**

A: The Parent Portal mobile app by Education Logistics, Inc. (Edulog) allows school boards and consortia to share planned and actual school transportation information with parents and guardians. The app provides the latest information on the planned time and location of the student's school bus stop. It can show the position of the school bus and give an alert as the bus nears the bus stop.

Download the Edulog Parent Portal from the Google Play Store or the Apple App Store. Search for "Edulog Parent Portal" and choose the app with the white bus on the teal background.

Once you have downloaded the app, sign up using your email address.

**Q: Is there a French version?**

A: Yes. Once you have the app installed, the language can be changed from English to French on the SETTINGS tab. Make sure to select SAVE to continue in the language of your choice.

**Q: Should I register separately for each of my children?**

A: A single registration allows you to access information for all students for whom you have the security information.

### NOW THAT YOU HAVE INSTALLED THE APP - GETTING STARTED

**Q: How do I register my student in the Parent Portal?**

A: This is done from the STUDENT LIST tab by selecting the "+" icon or the ADD STUDENT button. In order to register your student, you must have 5 pieces of information to ensure security.

1. Student's First Name
2. Student's Last Name
3. School to which the student is registered.
4. Student's date of birth
5. Student ID Number (this is your Ontario Education Number that can be found on your students report card)

**NOTE: Edulog's other parent app, Parent Portal Lite, has a yellow icon, so take care to download the correct app. Using the QR code pictured here will access the correct app.**

**Q: My student's first or last name is often misspelled or has multiple spellings. Which spelling do I use to access his/her information in the app?**

A: You must use the spelling of the first and last name that matches the spelling used by the school board's student information system.

**Q: I am having trouble finding my student's school to fill in the SCHOOL field. What am I missing?**

A: There are two ways to select your student's school.

1. One is to search based on the school name. As you type part of the school name, you will see schools that match that name, in full or in part. For instance, for Booker T. Washington School, you can begin typing "Booker" or "Washington" and a list of matching schools will appear.
2. Alternatively, you can click on the small map icon to the right of the school field and then locate the school on the map, selecting the icon displayed at the school location.

**Q: My student shows as PENDING or REJECTED. What do I do?**

A: Typically, a student registration shows as PENDING or REJECTED if all 5 security fields do not match. You can see the data that you entered by selecting this student in the app and examining the data to check for typographical errors. If you have questions about the spelling of the name or the Student ID number, you should contact the Consortium.

**Q: How do I delete a student from my app?**

A: From the STUDENTS tab, just swipe left for that student. This is also the process you use to delete a PENDING or REJECTED registration.

## USING THE APP

**Q: What does the HOME tab tell me?**

A: The HOME tab shows the basic trip information for each student that you have added on your app. Typically this will be a morning and afternoon trip. For each trip the app displays the student's name, whether notifications are activated for the trip, the scheduled pickup and drop-off times and the bus number. Trips are displayed in the order of the next pick-up or drop-off time.

**Q: What is the envelope icon on the top right of the Home screen?**

A: The Consortium may send messages to parents and others that are using the app. Messages may be sent to specific individuals or those with students assigned to a specific bus route. App users receive these messages as a notification on their phone. Selecting the envelope icon allows you to see previously received messages.

**Q: What do the pickup and drop off times mean? What about the distance?**

A: On the HOME tab or the Transportation Schedule screen, the locations and times for pickup and drop-off are those planned by the Consortium. On the MY BUS tab, there is a distance which indicates how far, as the crow flies, the bus currently is from the planned bus stop.

**Q: There is a date and time displayed by the bus icon. What does that mean?**

A: On the MY BUS tab, the last reported time for the school bus is displayed beside the bus icon.  
**NOTE:** App users should understand that if the bus location has not been reported for recently, there could be problems with the GPS signal or other communications issues. In such a case, students should report to their bus stop at the usual time, 5 minutes before the expected time of the bus. This time display is important information to help parents correctly interpret the Where's My Bus information.

**Q: Why can't I see the location of our school bus?**

A: The bus icon will be visible only when buses are running routes.

**Q: What if the map is inaccurate?**

A: Edulog's parent app uses Google Maps as its base map for display. No map source is perfect, but we have found the data in Google Maps to be sufficiently accurate to support the app. Unfortunately, Edulog has no ability to immediately correct Google's base map. You may provide information directly to Google Maps via their "send feedback" option at <https://www.google.com/maps>.

**Q: My student transfers to another bus. How will the app handle that?**

A: The school that you enter to access a student's data is the school that he or she attends. It may be that they transfer to a second bus before arriving at the school. However, morning alerts are sent as the bus arrives at the "home" school bus stop. That is, you will view the location of the bus that picks up the student at the bus stop of origin, presumably near the home. Similarly, in the afternoon you will see the bus as it approaches the "home" bus stop and receive notifications as the bus approaches that stop.

**Q: We just moved. When can I start using the app?**

A: The activation time for new transportation requests with the Consortium is typically two school days.

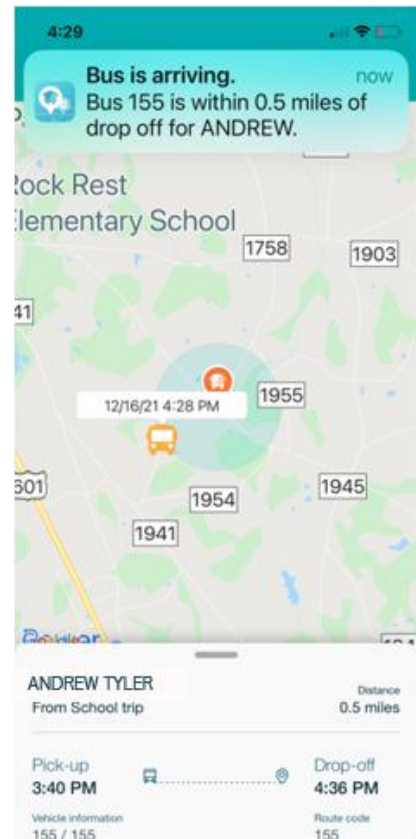

**RECEIVING NOTIFICATIONS**

**Q: When will I get notifications as the bus arrives at the bus stop?**

A: You can receive notifications for the morning bus stop or the afternoon bus stop or both. Set a notification zone for each. Each can have a different radius. Set it to one that makes the most sense for each bus route. Further, there is a time window for notifications which you also control. The default time is from one hour before until one hour after the scheduled bus stop time. You may want to set a shorter window, especially if the same bus is in your area, perhaps serving another school, before or after your bus route.

**Q: How reliable are the notifications?**

A: The notifications are sent immediately when a GPS ping from your bus occurs within the notification zone. The school bus sends regular GPS pings to the app database in the cloud every 10-30 seconds. As with all technology, disruptions can occur. A lag can be produced if there is a disruption in cellular service or the GPS unit on the bus is disconnected. Make sure to monitor the app for bus movement prior to the expected time of the bus.

## ABOUT THE INFORMATION

**Q: Can other app users see my student's Information?**

A: NO. Only people with information in the required security fields are able to access a student's transportation information in the app.

**Q: Where does the information about my bus stop come from?**

A: The planned time and location of your student's bus stop comes from the Edulog route management system used by your Consortium.

**Q: Is my student's picture stored on the internet?**

A: NO. Pictures that you associate with the app, either from your photo library or taken new with the camera are resident on the mobile device where it is initiated. If you load the app on two different devices, you will need to associate a photo on each device.
